WHO WE ARE

Intec Systems, established in 1981, have dedicated 30 years to software development for the Architectural Ironmongery Industry and enjoy a very enviable reputation in the UK and around the world.

All modules have been developed in house by Intec Systems and encompass many unique features written specifically for the industry. Bespoke modifications can be made easily to incorporate any individual requirements that you may have.

AN OVERVIEW

Our solution is unique and very personalised and can be adapted for any circumstance. Our users include individual hardware consultants, architectural ironmongers and leading worldwide hardware manufacturers with multiple locations. Based on an easy to use journey a user can easily switch between projects and utilise many of its bespoke features at the click of a button.

Our software is very cost effective and can be easily adapted to any users requirements or existing software with bespoke add on modules created and integrated into our system.

KEY FEATURES

- Provide Clients and Architects With Professional Industry Standard Documentation
- House Type Schedules for Residential Developments
- Schedules for Apartment Blocks / Hotel Developments
- Standard Ironmongery Schedules With Door Sets
- Simple Quotations and Bill of Quantities
- Extensive Range of Client Reports in PDF/Excel Formats
- Automatically Builds Full Specification Document With Product Images and Technical Information
- Option To Print Client Documentation In Alternative Languages
- Multi Currency Pricing
- Cost / Margin / Profit Reporting Tools
- Retain Previous Revisions
- Allows Creation of Libraries of Standard Ironmongery Sets
- Option to Hide Product References and Descriptions
- Reporting Option With/Without Prices or as 'Ironmongery Set Price'
- Create & Maintain Specials
- Supply and Pack By Doorset Paperwork

RECENT DEVELOPMENTS

- International versions and expanded to more countries.
- Associated industries such as door and window manufacturers and installers.
- Fully integrated touch screen information and sales module for showrooms and client presentations.

INTEC PROJECT

Intec Project Ironmongery Scheduling
Sample Screen Shots

Each contact may be assigned a currency price list and alternative language for their reports.

The product summary shows all products currently used in the project.

Standard Schedules offer sets of hardware with associated door references.

Products can be easily replaced throughout the entire schedule with one easy click.

Quickly create door sets and allocate door numbers to each set.

House type scheduling offers many options including office blocks, hotel suites, residential developments etc.

Easily updated pricing function. Cost / Margin / Profit reporting tools available in the printing statistical analysis module.

Product summaries can be obtained for individual blocks/ levels in addition to project summaries.

TESTIMONIALS

Intec Door Scheduling System ticks all of the boxes. Very user friendly, produces professional results, a real help in our day to day business.

Chris Thorpe, Manager

At Aspex UK we have been using Intec software to manage our company operations since our foundation in 2006. Our directors have had the benefit of using it with previous companies going back nearly 20 years. The software is perfect for the management of architectural ironmongery contracts with it's easy to use door scheduling and integration with inventory / accounts. Intec's knowledge of our industry, quality of service, friendly and experienced staff have been invaluable in helping to make our systems run smoothly.

Paul Ashberry, Aspex UK Ltd

Cartwright Hardware became one Intec's first clients nearly 30 years ago. At that time Intec led and continues to hold a leading position in the development of software for the Architectural Ironmongery industry and today still provides a vital service to our company.

Keith Trotter, Managing Director

We have used the Intec Door Scheduling programme for over ten years and find it to be reliable and easy for us and our clients to understand.

Richard Trinick, Director

Intec provides us with a solution that allows us to schedule numerous projects, large or small, in a fast and efficient manner.

Phil Haigh, RB Architectural Ltd

I first used the Intec Scheduling package whilst part of the Laidlaw Group, I soon implemented it as a complete stock control and order processing package into Yannedis in 1998. All of the staff found it very easy to use, even the older Estimators that had previously resisted change from their 'manual systems'. Intec's scheduling software soon became the industry standard making it easy to train new employees. I have changed companies several times since leaving Yannedis and have always used the Intec package. I will continue to do so until another package is proven to be better, but after 15 years I have yet to see anything that is equal.

Peter Hutchins, Franchi Ltd

COMPANY HISTORY

In 1983 Intec Systems developed bespoke stock control and accounting software suite for a local ironmongery shop. The shop expanded into the Architectural field and with additional administration requirements Intec enhanced the software to include Sales Order Processing and Contracts Management.

Several buy out's eventually led to the shop being purchased by the Frederick Cooper Group of companies, at that time one of the largest groups of Architectural Ironmongers in the UK. In early 1991 Intec started the installation of the MIS software throughout the UK to all of their branches. During the installation Intec Project was designed and developed which completed the full suite of programs. The managing director at Beaver was so impressed with the system and support he introduced Intec to several other key people within the industry, the majority of whom ordered Intec Project and/or the full system. Most of these customers are still using Intec software to this day.

Intec Systems quickly developed additional modules within the Door Scheduling software to provide more features to allow the software to work for the majority of Architectural Ironmongers throughout the UK. We worked closely with The Guild of Architectural Ironmongery and our client base to ensure the product encompassed the unique requirements of the Guild's training program for Door Scheduling, the Architects requirements and the practical needs of the Estimator using the software.

In 1995 we were honoured to be accepted as Associate Members of the Guild of Architectural Ironmongers. The GAI acknowledged our expertise and commitment and we continue to work closely with them. We are in the privileged position to be recommended by them.

Intec then successfully developed the Industry in Southern Ireland, and subsequently installed the Door Scheduling software into a number of companies in Dubai and Hong Kong.

In recent years Intec has expanded it's operations into South Asia and the Indian subcontinent with installations into various countries which include India, Singapore, Vietnam and Thailand. Additional modules and features being written to encompass the global requirements of the Architectural Ironmonger.
